1. National Consumer Price Index

The Bureau of Statistics has re-based the national Consumer Price Index.

The Consumer Price Index measures the change in the cost of the goods and services in the month under review compared with an earlier period. The annual inflation rate is the change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.

The national CPI encompasses all the expenditures on goods and services in Lesotho by private households. It is a measure of average inflation, based on average household expenditure on the items in the shopping basket.

The expenditure weights are used to aggregate prices for different categories of goods and services so that each takes an appropriate share to replicate consumer behavior and the basket of items priced reflects expenditure and shopping patterns from the 2017/2018 Household Budget Survey.

The prices used in the calculation of the CPI reflect the cash prices typically paid by the reference population for the goods and services within the scope of the index.

The indices is rebased using the price reference period as the yearly average, so that 2022 = 100.
