

Quarterly National Accounts of Lesotho Second Quarter 2023

The publication of Second quarter of Quarterly Gross Domestic Product (QGDP) covers the period July-September, 2023. The compilations of the estimates of QGDP follow the international recommendations as specified in the 2008 System of National Accounts (2008 SNA). The analysis provides more timely, regular, and comprehensive short-term indicators as opposed to annual estimates. The reference period for the quarterly accounts covers a period of three months in a year and are published 90 days after the reference quarter.

This statistical publication presents QGDP, which is the short-term indicator for the performance of the economy. The report highlights QGDP at current and constant 2012 prices for the years 2007-2023 derived by the production approach. The percentage changes of GDP, seasonally adjusted GDP, and the percentage contribution of all industries to GDP were considered.

It should be noted that the estimates are experimental in the sense that some of the sources should be reviewed and improved since their information is not collected for statistical purposes. Thus, the subsequent publication of QGDP may include revisions of some economic activities.

The estimates are available on the website of Bureau of Statistics (BOS) as a PDF-file with three tables and few graphs as shown in Appendix 2. Excel files will also be available for download.

1. Key findings: Second quarter 2023 GDP estimates

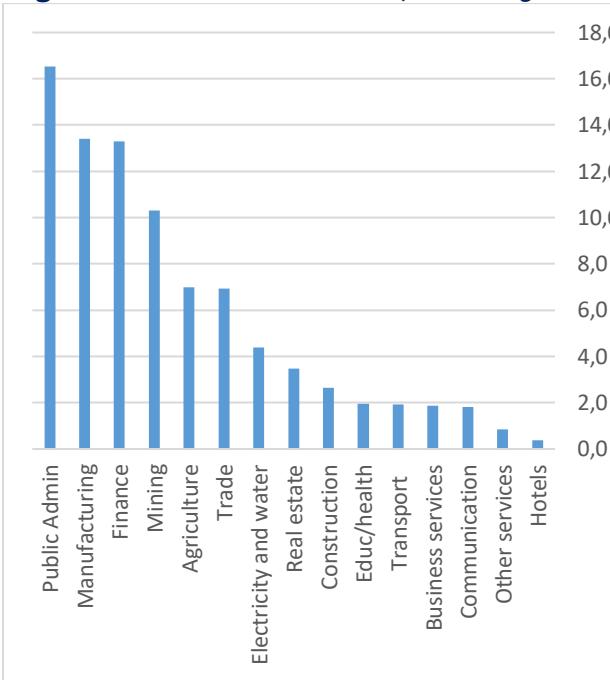

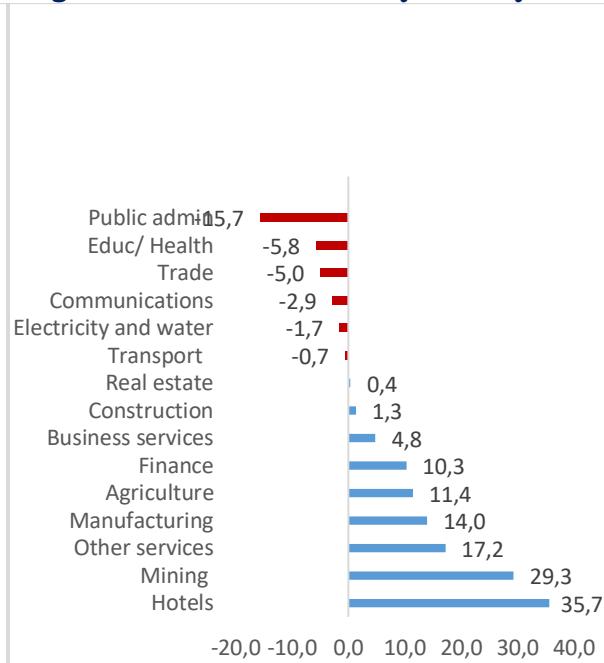

Real GDP in the Second quarter of 2023 increased by 1.5 percent.

The national economy improved by 1.5 percent during the period under review, as opposed to a contraction of 1.4 percent of the corresponding quarter of 2022. Growth was constituted mainly by Hotels and Restaurants, Mining and Quarrying, Other Services, Manufacturing, Agriculture, and Finance and Insurance.

Figure 1: Real GDP year-on-year growth Rates

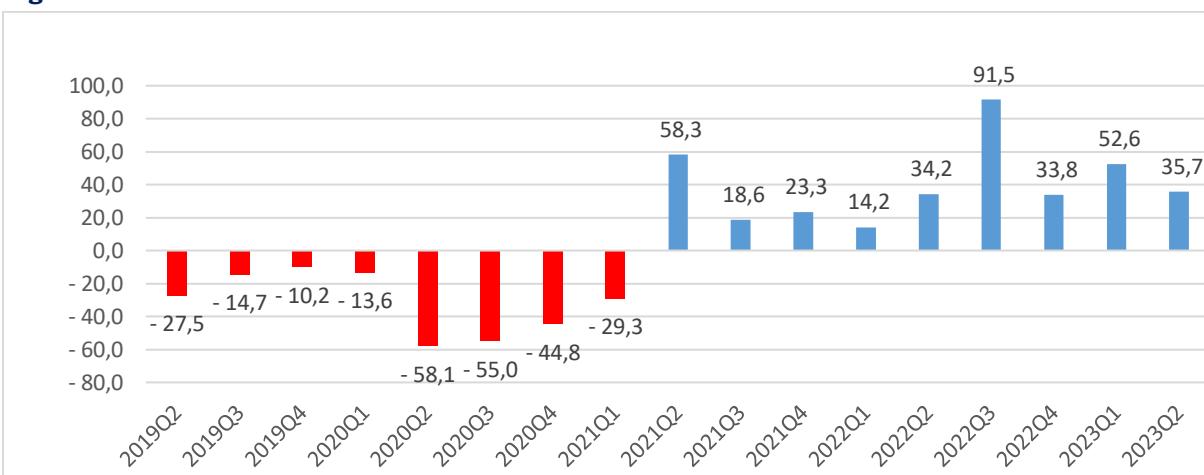

The findings show that nine of the fifteen industries recorded positive growth rates in the second quarter, which is an improvement compared to the same quarter of the preceding year. The highest performer is Hotels and restaurants with 35.7 percent GDP growth rate followed by Mining and Quarrying constituting 29.3 percent and then Other Services by 17.2 percent. On the contrary, the worst performing industries were Education and Health, which declined by 5.8 percent, followed by Wholesale and Retail Trade which dropped by 5.0 percent, and Information and Communication, which fell by 2.9 percent.

Figure 2: Contributions to GDP, second Quarter**Figure 3: GDP Growth Rates by Industry**

2. Hotels and Restaurants

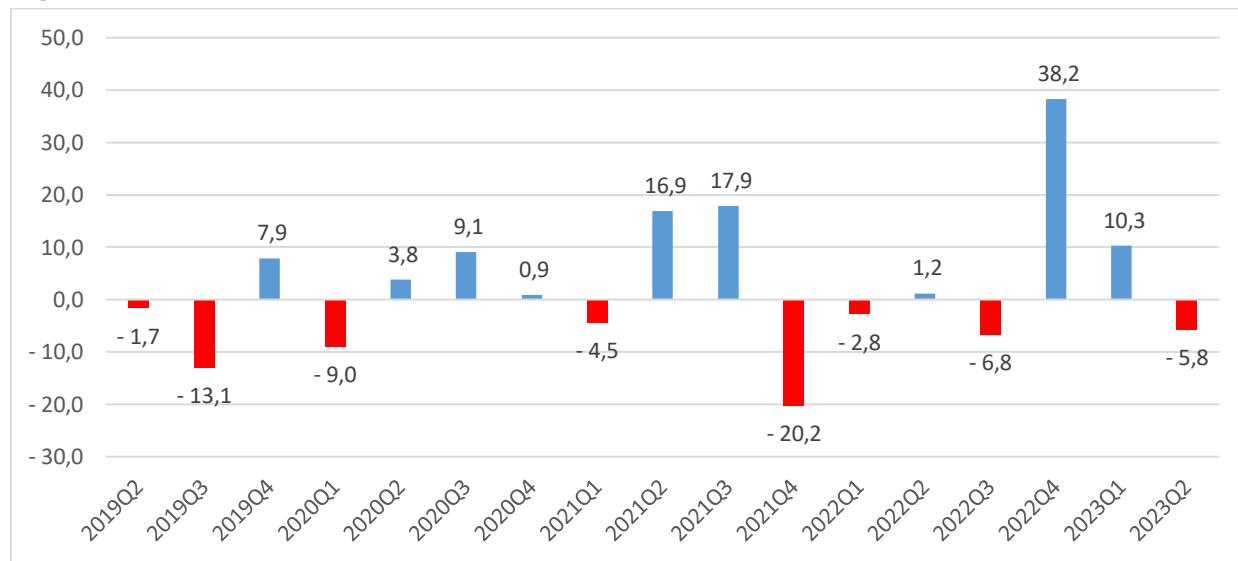

The Hotels and Restaurants industry recorded 35.7 percent in the second quarter of 2023, marking a modest improvement in comparison to the same quarter of 2022 which registered 34.2 percent. This substantial increase in the industry's performance can be mainly attributed to the rise in demand of accommodation as well as food services in restaurants. The industry contributed 0.4 percent to the overall GDP in the second quarter of 2023.

Figure 4: Hotels and Restaurants Growth Rates

3. Education and Health

The Health and Education industry registered a negative growth rate of -5.8 percent during the second quarter of 2023. This marked a departure from the positive direction observed in the corresponding quarter of 2022, which experienced a growth rate of 1.2 percent. This huge drop down was the result of the reduced demand of health services which dropped by 7.8 percent, offsetting a modest 0.6 percent in education services. The contribution of this industry to the overall GDP is 2.0 percent in the second quarter 2023.

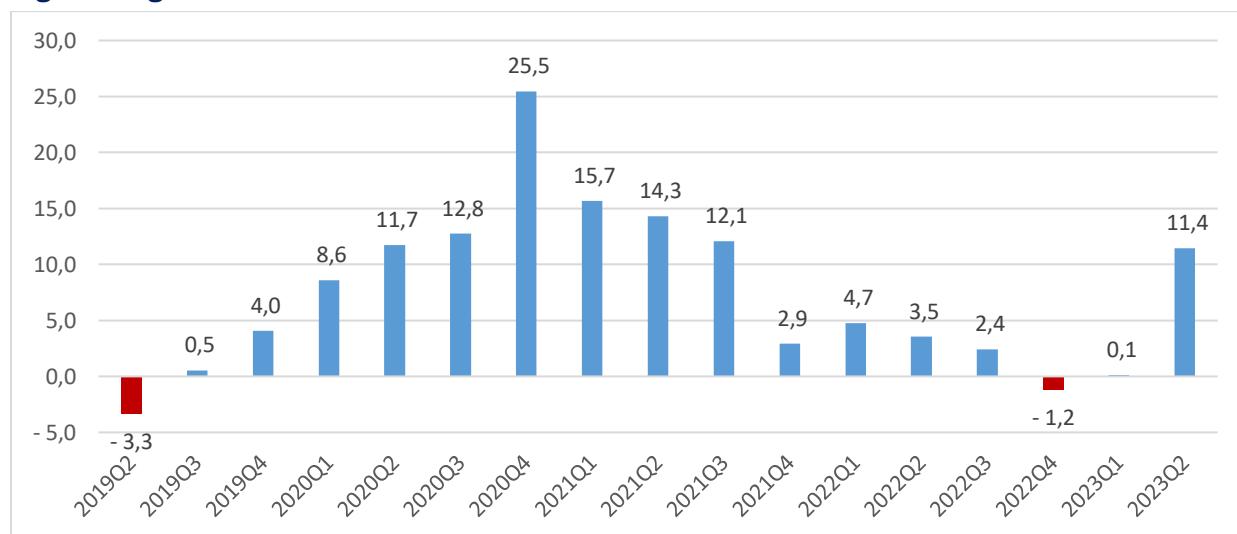

Figure 5: Education and Health Growth Rates

4. Agriculture

The Agriculture, Forestry and Fishing industry recorded a substantial increase of 11.4 percent in GDP growth rate of the second quarter of 2023 which is a remarkable improvement from 3.5 percent registered in the same quarter of 2022. The considerable growth was attributed to the increase in the stock to animals, especially cattle. The industry contributed 7.0 percent to the overall GDP in the second quarter of 2023.

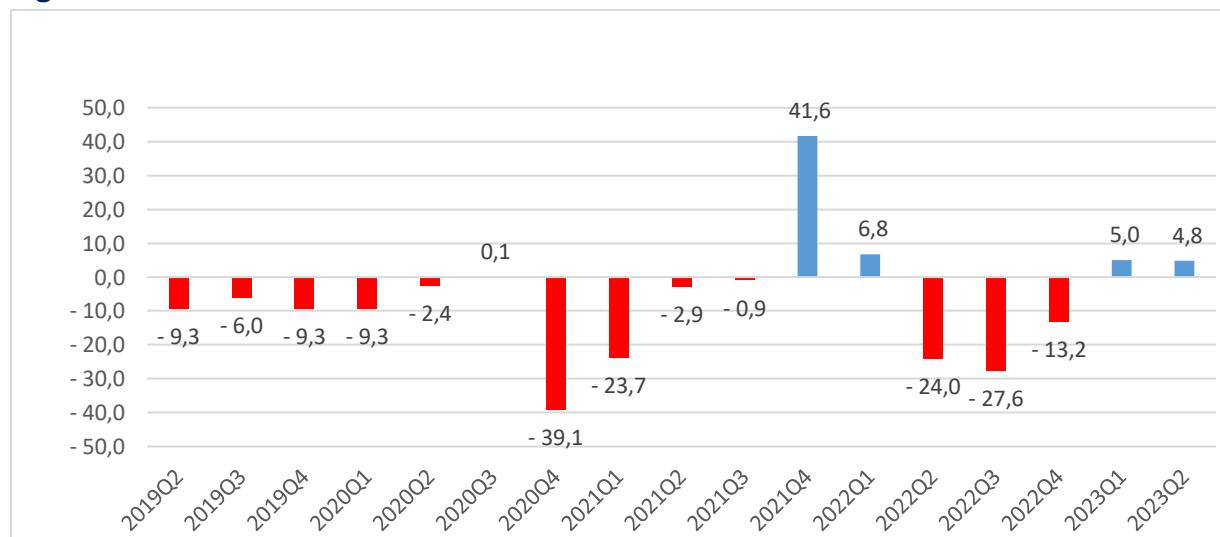

Figure 6: Agriculture Growth Rates

5. Business Services

Business Services registered a positive growth of 4.8 percent in the second quarter of 2023 which is a significant recovery from a drop of 24.0 percent recorded in the same quarter of the previous year. This recovery was a result of increased demand in administrative services. Business Services contributed 1.9 percent to the overall GDP in the second quarter of 2023.

Figure 7: Business Services

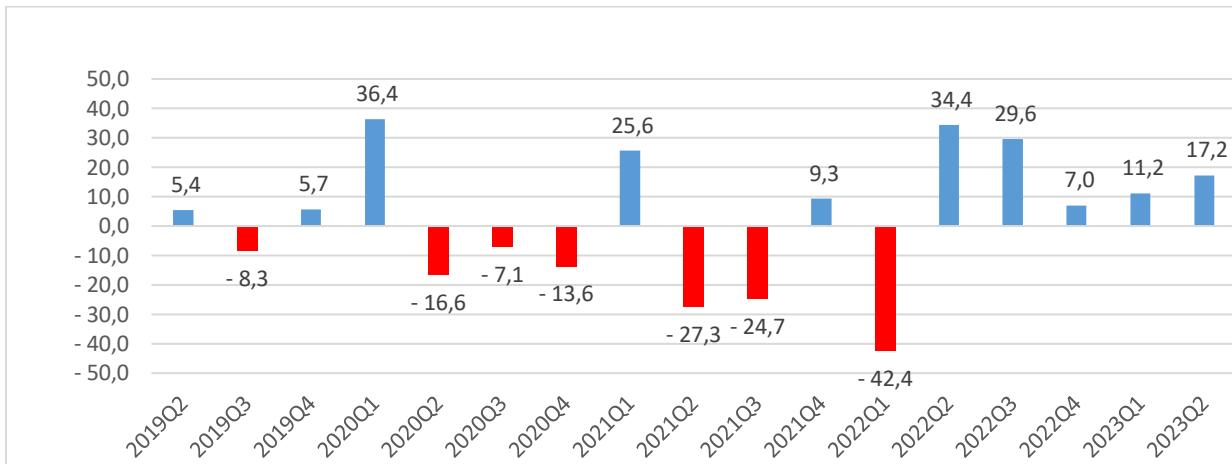

6. Other Services

The Other Services industry recorded an upright growth rate of 17.2 percent in the second quarter of 2023, although this represented a deceleration compared to the more rapid growth rate of 34.4 percent documented in the same quarter of the previous year. The substantial increase in both quarters in this industry is attributed to the increased

demand of other services which include funeral services and beauty services, among others. The contribution of Other Services to GDP is 0.8 percent in the second quarter of 2023.

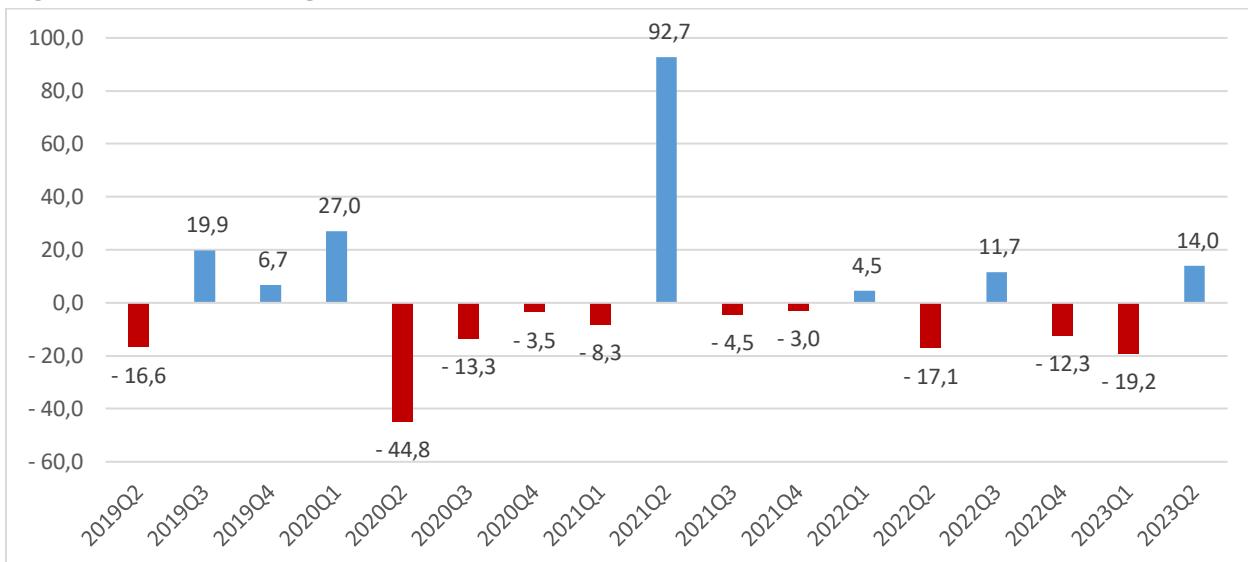

Figure 8: Other Services

7. Manufacturing

The Manufacturing industry recovered from a drop of 17.1 percent (in second quarter of 2022) by now registering a significant percentage of 14.0 in the same quarter of 2023. This substantial growth was attributed other exports of textiles and clothing which recorded a substantial increase of 87.7 percent. On the other hand, AGOA (square meters exported) decreased by 3.4 percent. It is noteworthy to highlight that manufacturing of food products also dropped by 8.0 percent, while manufacturing of beverages saw a sharper drop of 29.7 percent. However, these declines were offset by an increase of the weighty manufacturing of textiles and clothing. This industry holds a significant role in contributing to the GDP and it recorded the highest share, accounting for 13.4 percent of the total in the second quarter of 2023.

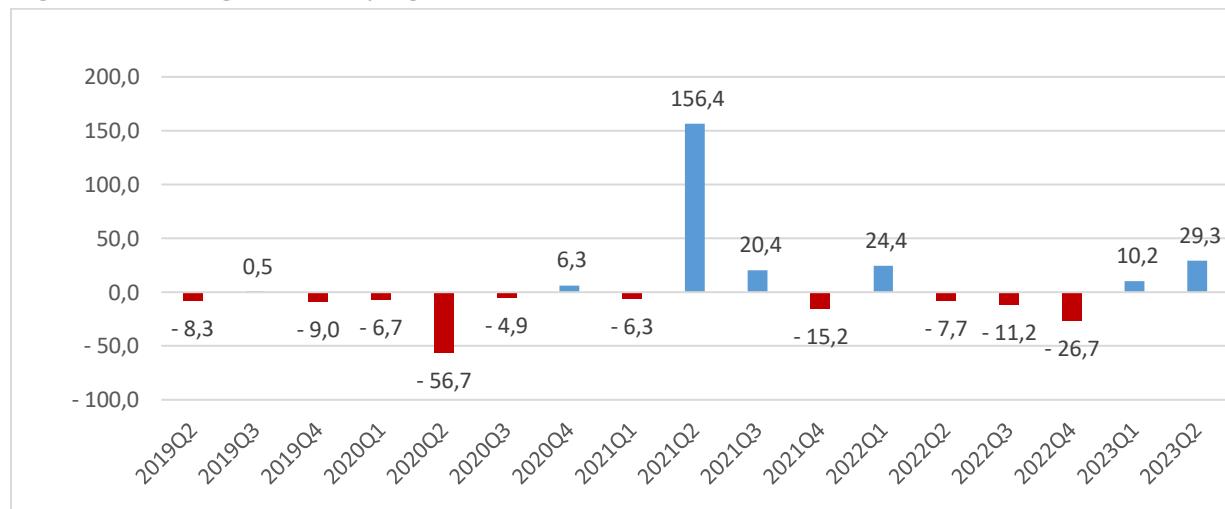

Figure 9: Manufacturing Growth Rates

8. Mining and Quarrying

Mining and Quarrying also showed a great recovery of 29.3 percent in the second quarter of 2023 from a very low base (-7.7 percent) seen in same quarter of 2022. This rise in the current quarter is credited to an increase in diamond production as well as the quality of stones that were recovered from the mines. Mining and Quarrying plays a significant role in the economy of Lesotho as it contributes a weighty percentage of 10.3 recorded in the second quarter of 2023.

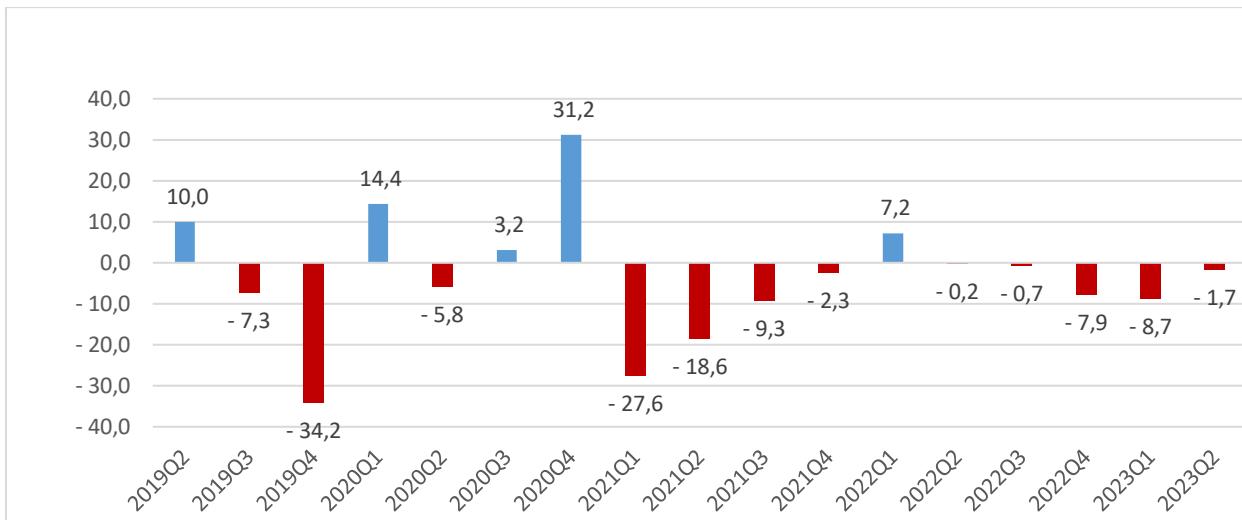

Figure 10: Mining and Quarrying Growth Rates

9. Electricity and Water

The Electricity and Water industry registered an extended decline of 1.7 percent in the second quarter of 2023 from a drop of 0.2 percent seen in the same quarter of 2022. This decline was attributed the reduced supply of water which dropped by 19.2 percent in the current quarter. It is also important to mention that the supply of electricity increased by 22.6 percent even-though this rise was offset by the drop in water supply. This industry contributed 4.4 percent to the overall GDP in the second quarter of 2023.

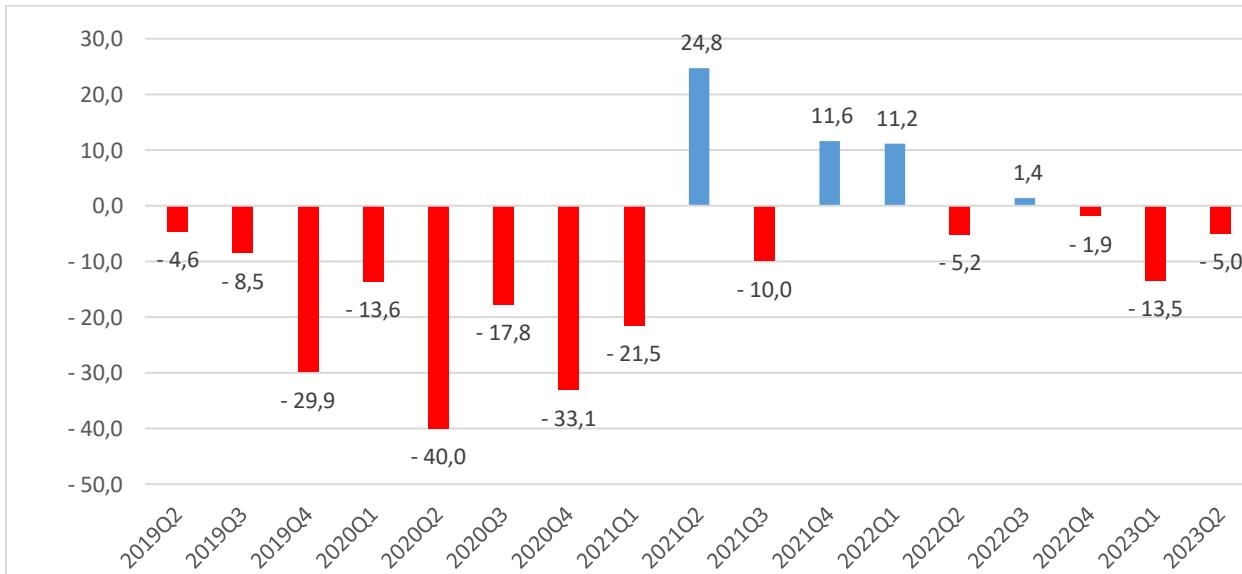

Figure 11: Electricity and Water Growth Rates

10. Wholesale and Retail Trade

The Wholesale and Retail trade industry registered back-to-back declines in both second quarter of 2023 and second quarter of 2022, recording -5.0 percent and -5.2 percent, respectively. This decline was accredited to the reduced activities relating to general trade as well as a drop in retail trade of fuels. The contribution of this industry to GDP is a moderate 6.9 percent in 2023 second quarter in comparison to 7.2 percent recorded in 2022 of the same quarter.

Figure 12: Wholesale and Retail Trade Growth Rates

11. Finance and Insurance

The Finance and Insurance industry recorded a significant growth of 10.3 percent in the second quarter of 2023. Simultaneously, this growth is more sluggish compared to the same quarter of 2022 when it registered a 12.0 percent growth rate. This increase in the recent quarter was accredited to other monetary intermediation (commercial banks) which increased by 12.2 percent due to increased stocks of loans as well as stocks of deposits. The Finance and Insurance industry is the second largest contributor to the GDP, following Manufacturing, and it recorded a significant 13.3 percent contribution in the most recent quarter.

10. Concepts and definitions

As mentioned above QGDP in Lesotho was compiled by the production approach only, and is derived as;

GDP compiled by the production approach (GDP by activity):

Sum of gross values added at basic prices

$$\begin{aligned} &+ \text{Taxes on products} \\ &- \text{Subsidies on products} \\ &= \text{GDP} \end{aligned}$$

The contribution of each economic activity to GDP is its value added, which is derived in the production account as:

$$\begin{aligned} &\text{Output at basic prices} \\ &- \text{Intermediate consumption at purchasers' prices} \\ &= \text{Gross value added at basic prices} \end{aligned}$$

The values of output and intermediate consumption, which are flows of goods and services, can be factored into two components, one reflecting changes in the prices of the goods and services concerned and the other the changes in their volumes. Measures in volume terms are derived by using the prices of a base year, hence the term “at constant prices”. In broad terms, there are two ways of deriving constant prices:

- a) by deflating the current price value by an appropriate price index; and
- b) by moving the base year value with volume index or volume indicator

Ideally, annual and quarterly GDP should be measured by deriving values added for each economic activity as per the Fourth equation above. Constant prices should then be derived in the same way, i.e. by deflating output and intermediate consumption by their own appropriate price indices.

11. Sources and Methods

Data sources used for estimates of QGDP are generally more limited in detail and coverage than those available for the annual estimates. An important factor is that the data sources must be timelier than the data used for the annual estimates. Thus, the estimates of QGDP in Lesotho are based on indicators that capture the movements in the target variable, i.e., output and value added in estimating QGDP by activity. As far as possible, the same indicators will be used as in the annual estimates.

The table below summarizes methodology and indicators used per industry. The table also shows the reliability checks, as the correlations between ANA and Indicators, as well as the improvement plans for individual industries. This table does not constitute all industries yet therefore, it will be published in parts.

Table 5: Sources and Methods

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
Growing of crops; horticulture	VAT taxes on agricultural products (value index base=2012), CPI & PPI	<p>The indicator is the composite index of 4 groups of products weighted by the annual output.</p> <p><u>Plants:</u> the CP indicator is VAT value index weighted by the annual VA, the KP indicator is CP deflated by PPI</p> <p><u>Fruit:</u> The KP indicator is the annual VA quarterized with the following pattern Q1=0.7, Q2=0.1, Q3=0.1, Q4=0.1. CP is KP inflated by CPI.</p> <p><u>Cereals:</u> The KP indicator is the annual VA quarterized with the following pattern Q1=0.05, Q2=0.15, Q3=0.00, Q4=0.8 CP is KP inflated by quarterized annual implicit deflator</p> <p><u>Vegetables;</u> KP is the quarterization of the annual value and CP is KP reflated by CPI</p>	CC (CP)*=0.99 CC (KP)*=0.99	Need a plan to move ahead without annual value
Animal production		Denton without indicator		
Fishing and aquaculture	no indicator	Denton without indicator		
Quarrying of stone, sand and clay	Average of PPI for aggregated crushed stones and sand	Indicator of CP is VAT. Indicator of KP is CP deflated by PPI	CC(CP) = 0.99 CC(KP) = 1.00	

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
	VAT for quarrying of stone			
Mining of diamonds	Quantity and Price of the mining companies	<p>The indicator is the sum: VA of Lets'eng: Output at CP is one quarter of the 2012 annual value extrapolated with the value index (calculated from quantity and price);</p> <p>Output KP is one quarter of the 2012 annual value extrapolated with the quantity index;</p> <p>IC at KP is quarterization of annual values by the output at KP;</p> <p>IC at CP is IC at KP reflated by the IC deflator (calculated as the weighted average of electricity (0.06), fuel (0.21) and other products (0.73))</p> <p>Output of other mines;</p> <p>Output CP is one quarter of the 2012 annual value, extrapolated with the value index of the output of the 3 remaining companies.</p> <p>Output KP is one quarter of the 2012 annual value, extrapolated with the</p>	<p>CC(CP) = 0.84 CC(KP) = 0.84</p> <p>Plan to look for the VA of other mines as well</p>	

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
		quantity index of the three remaining companies.		
Support activities to mining	VAT of mining support services and SA PPI of civil engineering	CP, VAT is used as an indicator. KP is the deflated CP	CC(CP) = 0.99 CC(KP) = 0.99	
Manufacture of food products	VAT for Processing and preserving of meat, Manufacture of dairy products, Manufacture of grain mill products, Manufacture of bakery products, Manufacture of other food products CPI for bread SA PPI for grain mill	The indicator for CP is the sum of VAT The indicator of KP is the indicator of CP deflated by the weighted average of CPI (0.34) and PPI (0.66)	CC(CP) = 0.85 CC(KP) = 0.82	
Construction	VAT for construction of roads, other civil engineering projects, building completion and Other specialized construction activities. CPI services (straight average) was used as the deflator.	The indicator for CP is the sum of VAT for all construction activities. KP is CP deflated by CPI. <u>Steps</u> Fourth of all, rebase the VAT to 2012. Benchmark VA at CP with VAT to get the quarterly VA at CP. Deflate quarterly VA at CP by CPI to get quarterly indicator for VA at KP. Benchmark quarterly indicator of the annual VA at KP to	CC(CP) = 0.91 CC(KP) = 1.00	Plan is to streamline by skipping the rebasing and use VAT and CPI straight forward.

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
		get quarterly VA at KP.		
Water supply and sewerage	<u>LHDA</u> Monthly data on exports to SA (values and quantities) <u>WASCO</u> <u>VAT Data</u> <u>Government</u> Quarterly data on wages and salaries (Government data)	<u>LHDA</u> The indicator for CP is the water sales in values. KP is the base year value multiplied by water sales in quantities. <u>WASCO</u> The indicator for CP is VAT for the company involved in water collection, treatment and distribution. KP is CP deflated by CPI. <u>Government</u> The Indicator for CP are Quarterly data on wages and salaries, while KP is CP deflated by the quarterized annual implicit deflator.	CC(CP) = 0.84 CC(KP) = 0.57	Need a plan to move ahead without annual value
Trade, repair of motor vehicles	VAT for Trade and repair of motor vehicles establishments, and CPI	The indicator for CP is VAT. KP is CP deflated by CPI	CC(CP) = 1.00 CC(KP) = 0.99	
Wholesale and retail trade of fuels	VAT for Wholesale and retail trade of fuels establishments	For this one, calculations are done separately for Output and Intermediate consumption; Indicator for Output CP is VAT Output KP is Output CP deflated by CPI for Food (0.05) and CPI for Fuels (0.95) weighted.	CC(CP) = 1.00 CC(KP) = 1.00	

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
		<p>Intermediate consumption KP is moved with output KP</p> <p>Intermediate consumption CP is intermediate consumption KP reflated by weighted CPI for Electricity (0.06), Actual renting for housing (0.17) and Services (0.77)</p> <p>Value added = Output – intermediate consumption</p>		
Wholesale and retail trade except motor vehicle, motorcycles and fuels	VAT for Wholesale and retail trade except motor vehicle, motorcycles and fuels	<p>For this one also, calculations are done separately for Output and Intermediate consumption;</p> <p>Indicator for Output CP is VAT.</p> <p>Output KP is Output CP deflated by CPI for all items.</p> <p>Intermediate consumption KP is moved with output KP</p> <p>Intermediate consumption CP is intermediate consumption KP reflated by weighted CPI for Electricity (0.06), Actual renting for housing (0.21), Fuels and lubricants (0.04), Transportation (0.13) and Services (0.56)</p>	CC(CP) = 0.98 CC(KP) = 0.97	

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
		Value added = Output – intermediate consumption		
Freight transport by road	Related Industries being; Wholesale and retail trade of fuels and Wholesale and retail trade except motor vehicle, motorcycles and fuels CPI	The indicator for KP is movement of value added of Wholesale and retail trade of fuels, and Wholesale and retail trade except motor vehicle, motorcycles and fuels. CP is KP reflated by CPI	CC(CP) = 1.00 CC(KP) = 1.00	
Transport support; postal and courier activities	<u>Private sector</u> VAT for transport, postal and courier activities <u>Government</u> Quarterly data on wages and salaries (Government data) CPI	<u>Private sector</u> The indicator for CP is VAT for transport, postal and courier activities. KP is CP deflated by weighted deflator for support activities to transportation (0.9) and deflator for postal and courier activities (0.1). <u>Government</u> The indicator for CP is quarterly data on wages and salaries. KP is CP deflated by quarterized annual implicit deflator.	CC(CP) = 0.88 CC(KP) = 0.84	Need a plan to move ahead without annual value
Accommodation	VAT for Accommodation Activities and CPI	Output and Intermediate consumption are separately calculated;	CC(CP) = 0.88 CC(KP) = 0.84	

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
		<p>Indicator for output CP is VAT.</p> <p>Output KP is Output CP deflated by CPI (average of Food, Non-food and services)</p> <p>Intermediate consumption KP is moved with output KP</p> <p>Intermediate consumption CP is Intermediate consumption KP reflated by weighted CPI of raw materials (0.7), electricity (0.1) and services (0.2).</p> <p>Value added = Output – intermediate consumption</p>		
Telecommunications	VAT for telecommunication activities and CPI	<p>Indicator for output CP is VAT.</p> <p>Output KP is output CP deflated by CPI telephone and telefax services.</p> <p>Intermediate consumption KP is moved with output KP</p> <p>Intermediate consumption CP is intermediate consumption KP reflated by weighted CPI for telephone and telefax services (0.24), Non-food</p>	CC(CP) = 0.31 CC(KP) = 0.33	Concern is that the relationship between the annual and quarterly indicators is low. A plan in place to reconsider

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
		goods (0.05) and Services (0.71) Value added = Output – intermediate consumption		
Other monetary intermediation	Depository Corporations Survey (DCS) and CPI	Indicator for CP is stocks of loans and deposits. KP is CP Stocks of loans and deposits deflated by CPI all items.	CC(CP) = 0.94 CC(KP) = 0.61	
Other financial service activities	Depository Corporations Survey (DCS) and CPI	Indicator for CP is Stocks of household loans taken from Other financial intermediation industry in Sheet DCS. KP is CP deflated by CPI all items.	CC(CP) = -0.07 CC(KP) = 1.00	Plan to reconsider seeing that CC CP is very low.
Real estate activities	VAT for real estate activities, Population statistics and CPI.	<u>Corporations</u> Indicator for Output CP is VAT. Output KP is Output CP deflated by CPI for Actual Renting for Housing. Intermediate consumption KP is Moved with output KP Intermediate consumption CP is intermediate consumption KP reflated by straight average of CPI for Insurance, Financial services, Non-food Goods and Services.	CC(CP) = 1.00 CC(KP) = 0.98	

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
		<p>Value added = Output – intermediate consumption</p> <p><u>Households, market and Owner-occupied dwelling</u></p> <p>Indicator for output KP is estimated by the Denton Method, from annual estimate that uses Urban population growth for Households, market, and total population growth for Owner-occupied dwellings.</p> <p>Output CP is output KP reflated by CPI.</p> <p>Intermediate consumption KP is moved with output KP</p> <p>Intermediate consumption CP is Intermediate consumption KP reflated by CPI.</p> <p>Value added = Output – intermediate consumption</p>		
Professional, scientific and technical activities	VAT for professional, scientific and technical activities.	<p><u>Private sector</u></p> <p>The indicator for CP is VAT.</p> <p>KP is CP deflated by CPI Services.</p> <p><u>Government</u></p>	CC(CP) = 0.78 CC(KP) = 0.79	

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
		Indicator for CP is quarterly data on wages and salaries KP is CP deflated by quarterized annual implicit deflator		
Rental and leasing activities; travel agents	VAT for Rental and leasing activities; travel agents.	<u>Renting Activities</u> Indicator for CP is VAT. KP is CP deflated by straight average of CPI for Motor cars, Operation of personal transport and Non-food goods. <u>Travel agents</u> Indicator for CP is VAT. KP is CP deflated by CPI Services.	CC(CP) = 0.58 CC(KP) = 0.79	
Security and investigation activities	VAT for Security and investigation activities.	Indicator for CP is VAT. KP is CP deflated by straight average of CPI for Goods, Services, and Fuels and lubricants.	CC(CP) = 1.00 CC(KP) = 0.60	
Admin and support service activities n.e.s.	VAT for Admin and support service activities.	Indicator for CP is VAT. KP is CP deflated by straight average of CPI for Non-food goods and Services.	CC(CP) = 1.00 CC(KP) = 1.00	
Public administration	Quarterly data on wages and salaries (Government data)	The Indicator for CP is quarterly data on wages and salaries adjusted with share of consumption of fixed capital KP is CP deflated by quarterised annual implicit deflator	CC(CP) = 0.73 CC(KP) = 0.61	

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
Education	Quarterly data on wages and salaries (Government data)	<u>Government funded schools (Fourthary and primary)</u> The indicator for CP is quarterly data on wages and salaries. KP is annual value divided by four. <u>Parastatals and private schools</u> Denton Method without indicator	CC(CP) = 1.00 CC(KP) = 1.00	Need to reconsider how to move ahead without annual value Plan is to use salary/ wages index
Human health and social work activities	VAT for Human health and social-work activities. Quarterly data on wages and salaries (Government data) CPI	<u>Private sector</u> The indicator for CP is VAT. KP is CP deflated by straight average CPI for Out-patient services, Hospital services and Services. <u>Government</u> CP is estimated by quarterly data on wages and salaries. KP is CP deflated by quarterised annual implicit deflator.	CC(CP) = 0.94 CC(KP) = 0.95	Need to reconsider how to move ahead without annual value Plan is to use salary/ wages index
Arts, entertainment and recreation	VAT for Human health and social-work activities. Quarterly data on wages and salaries (Government data) CPI	<u>Private sector</u> The indicator for CP is VAT. KP is CP deflated by straight average CPI for Cultural services and Games of chance. <u>Government</u> CP is estimated by quarterly data on wages and salaries. KP is CP deflated by quarterized annual implicit deflator.	CC(CP) = 0.84 CC(KP) = 0.78	Need to reconsider how to move ahead without annual value Plan is to use salary/ wages index

QNA Activities	Indicators used	Methodology	Indicator of reliability	Improvement plan
Activities of membership organisations		Denton Method without indicator		
Other personal service activities	VAT for Other personal service activities. CPI	Indicator for CP is VAT. KP is CP deflated by straight average CPI for Repair of footwear, Hair-dressing saloons, and other services (e.g. funerals)	CC(CP) = 0.79 CC(KP) = 0.99	
Private households with employed persons	CPI	KP is estimated by synthetic quarterly values (Denton Method) CP is KP reflated by CPI, domestic servants (0.8) plus Food (0.2)		
FISIM	Depository Corporations Survey (DCS) and CPI	CP is estimated with Stocks of loans and deposits of non-financial corporations and non-bank financial institutions KP is CP deflated by CPI all items	CC(CP) = 0.54 CC(KP) = 0.90	

12. Revisions

The accuracy of National Accounts estimates depends on timely revisions to data on GDP and its components. Thus, National Accounts have to be revised over a number of years since data sources are always changing and improving. The time series must be suitably adjusted in order to reveal the best possible outcomes of the series in question over a long period. Such revisions are however usually small and done mainly to improve the results when new evidence become available.

The length of time series shown will depend on a number of factors. In general, comparison over many years need to be interpreted carefully in response to innovations in products, the growth of the economy over a long period, marketing strategies and changing import patterns.

Table 6A and 6B outline the revisions made from the first quarter of 2019 to fourth quarter of 2022. These results indicate that, in most cases, the real GDP growth for the published quarters remained consistent, except third quarter 2021 (changing from 0.3 percent to -0.9 percent) and second quarter of 2022 (shifting from -1.4 percent to 0.1 percent). Notably, the changes in the quarterly estimates for 2022 were primarily driven by the availability of 2022 annual data and hence estimates, since quarterly estimates were benchmarked to align with the more comprehensive annual data.

In the years 2019 and 2020, minimal changes were observed, except the last quarter of 2020, particularly in the Agriculture industry, where a substantial difference of 20.6 percentage points was recorded. For the rest of the quarters in Agriculture, large differences continued to be witnessed, primarily due to changes in data sources as well as minor methodological adjustments.

Mining and quarrying also recorded notable differences in the most recent quarters of 2021, resulting from inclusion of annual data (financial statements of mining companies) which were previously unavailable, necessitating adjustments. The release of the 2022 annual estimates played a crucial role pertaining the changes seen in 2022 quarterly estimates, since they were benchmarked to the annual data.

For industries such as Construction, Wholesale and Retail Trade, Hotels and Restaurants, Transport and Storage, Business Services, Other Services and Education and Health, significant changes were recorded across all quarters of 2022, stemming from substantial improvements in major quarterly data source.

In Manufacturing, Electricity and Water, Information and Communication as well as Finance and Insurance industries, changes occurred as a result of availability of annual financial records for companies within these industries and improvements in major quarterly data source.

Table 6A: Growth Rates Revisions from the first Quarter of 2019

Year	Quarter	Agriculture, forestry, fishing	B Mining and quarrying	C Manufacturing	DE Electricity and water	F Construction	G Whole-sale and retail trade	H Transport and storage	I Hotels and restaurants	J Information and communication
